

REDRY

Vent System Proposal

5600 Sunshine Dr | Austin TX 78756

Prepared For: Austin ISD | McCallum High School

Date: February 9th, 2026

HISTORY OF REDRY

In commercial roofing, moisture issues in roof insulation have historically left contractors with limited options. Traditional approaches require either costly full roof replacements and disruptive spot repairs or accepting the significant risks of leaving moisture untreated. The industry's needed a practical, effective, and professional solution.

At ReDry, we developed an innovative approach that precisely **detects** and **removes** moisture from roof insulation, avoiding unnecessary expense and disruption.

Utilizing advanced moisture-detection technology combined with targeted drying methods, ReDry restores roofs efficiently and reliably, extending service life, protecting warranties, and ensuring client satisfaction. Our detailed, professional reports provide clear data for informed decision-making, empowering contractors to deliver exceptional service with confidence and transparency.

When you partner with ReDry, you're choosing a company committed to protecting your reputation, increasing your profitability, and aligning fully with your business interests and goals.

Best Regards,

Adam Capps
